

The Skipper rechargeable safety light

This safety light is a multifunctional, LED system that attaches to Skipper and Skipper XS units. It's ideal for traffic control, airports, petrochemicals and many other industries. The unit has a light sensor for automatic activation/deactivation, or can be set to full manual control. The bright LEDs can be switched between a flashing or permanent setting, and the unit has an integrated rechargeable battery compartment which is powered by a standard adapter. Simply twist off the Skipper or Skipper XS unit's top cap, and twist on the rechargeable safety light. Conforms to BS3143 part 2 1990.
